deaths from the zymotic class of causes altogether, against 123 in corresponding period last year.
The crowded tenements and the poor classes throughout the city gave the increased mortality witnessed in the past two weeks.

The mean temperature last week was at 31.9 degrees Fahr., and in the previous week it was 30.6 degrees. The needy poor require charities which both teach and help to live healthfully now when the season is inclement and the demand for labor so depressed that vast numbers must live labor so depressed that vast numbers must live

scantily and in crowded tenements.

The death-rate is now fluctuating between 27 and 28 per 1,000 of the population. The death-rate for the past 52 weeks, and for the year 1874, is 27.5 per 1,000 of the total estimated population of 1,040,000 souls. This rate shows a favorable decrease from the steadily rates of the previous 18 months.
