## BOROUGH OF THE BRONX.

### BUREAU OF BUILDINGS.

Plumbing and Drainage Rules, as heretofore published and enforced in the Department of Buildings, boroughs of Manhattan and The Bronx, have been adopted by the Bureau of Buildings, Borough of The Bronx, with the following exceptions:

Paragraph 11, subdivision 1, is hereby amended to read as follows:

"Once in each year every employing or master plumber carrying on his trade, business or calling in The City of New York shall register his name and address at the office of the Bureau of Buildings, in the borough in which his place of business is located, under such rules and regulations as the Superintendent of Buildings shall prescribe and as hereinbefore provided."

After subdivision 3 insert the following:

"A plumber proposing to do work in a borough other than that in which he is registered shall present his certificate at the office of the Bureau of Buildings in that borough before commencing work, so that the fact of his having been properly registered may be recorded."

Section 79. Substitute the following:

"Sec. 79. A fresh-air inlet must be connected with the house drain just inside of the house-trap; where under ground, it will be of extra heavy cast iron. It must extend to the outer air, and finish with a return bend at least one foot above the grade and ten feet away from any window or cold-air box. When this arrangement is not possible the fresh-air inlet must open into the side of a box not less than eighteen inches square, placed below the sidewalk at the curb. The bottom of the box must be eighteen inches below the under side of the fresh-air inlet pipe. The box may be of cast iron, or it may be constructed with eight-inch walls of brick, or flagstone laid in hydraulic cement. The box must be covered by a flagstone fitted with removable metal grating, leaded into the stone, having openings equal in area to the area of the fresh-air inlet, and not less than one-half inch in their least dimension. The fresh-air inlet must be of the same size as the drain up to four inches; for five-inch and six-inch drains it must not be less than four inches in diameter; for seven-inch and eight-inch drains, not less than six inches in diameter, and for larger drains not less than eight inches in diameter."

After section 97 insert the following and change the numbers of the sections which follow it:

"Sec. 98. No masons' cesspool, bell, pot, bottle or D-trap will be permitted, nor any form of trap that is not self-cleaning nor has interior chamber or mechanism, nor any trap, except earthenware ones, that depend upon interior partitions for a seal."

Section 112. Substitute the following:

"Sec. 113. Safe waste-pipe from refrigerator must discharge over a water supplied sink as above. Refrigerator waste-pipes should not be trapped. In no case shall the refrigerator waste-pipe discharge over a sink located in a room used for living purposes."

Section 118. Substitute the following:

"Sec. 119. In tenement houses, lodging houses, factories, workshops and all public buildings the entire water-closet apartments and side walls, to a height of six inches from the floor, except at the door, must be made waterproof with asphalt, cement, tile, metal, or other waterproof material, as approved by the Superintendent of Buildings."

Section 119. Substitute the following:

"Sec. 120. In tenement houses and lodging houses the water-closet and urinal apartments must have a window opening to the outer air, except that lodging houses three stories or less in height may have such window opening on a ventilating shaft not less than ten square feet in area."

Sections 131 and 132. Substitute the following:

"Sec. 132. In lodging houses there must be one water-closet on each floor, and where there are more than fifteen persons on any floor there must be an additional water-closet on that floor for every fifteen additional persons or fraction thereof."

After section 134 insert the following and change the numbers of the sections which follow it:

"Sec. 135. Where flushometers are used they must be supplied from separate tanks provided for that purpose, and in no case are connections to be made direct with the water service pipe."

MICHAEL J. GARVIN,  
Superintendent of Buildings, Borough of The Bronx.

Approved.

LOUIS F. HAFFEN, President of the Borough of The Bronx.

BOARD OF EXAMINERS.

Meeting held May 6, 1902, 3 p. m.

Present—Messrs. W. J. Fryer, Warren A. Conover, Cornelius O'Reilly, William C. Smith, Chief Edward F. Croker and A. F. D'Oench, Chairman.

Minutes of meeting of April 29 read, and on motion, duly made and seconded, approved.

The Chairman read a communication from the City Clerk in re public hearing on building ordinances, Committee on Buildings, Board of Aldermen; which was ordered on file.

Appeal No. 98 of 1902, New Building No. 1553 of 1901, premises No. 42 West Forty-fourth street, and Nos. 44 to 50 West Forty-fifth street, Seaboard Realty Company, appellant.

Petition for reconsideration of Appeal No. 3, granted January 28, 1902.

For a modification of one of the requirements made by the Board of Examiners in granting Appeal No. 3 on the 28th day of January last, to build a pent house on the roof of building No. 43 West Forty-fourth street, Nos 44-50 West Forty-fifth street, in that—

The requirement that "the window frames, sash and doors, trim and base of the pent house be constructed of iron or wood covered with metal" be made to read that all woodwork for window frames, sash and doors, trims and base of the pent house shall be thoroughly fireproofed.

All other conditions imposed by the Board of Examiners in granting the said Appeal No. 3 will be lived up to, viz: All walls surrounding the pent house will be carried up to their proper heights; the floor will be made of cement; wire glass will be used wherever glass is necessary; proper skylights will be provided, and the highest point of the roof will not exceed 150 feet from the curb level. Fireproofing of the wood will be done by the Electric Fireproofing Company's process, the one which is fully accepted by the Bureau of Buildings. The entire pent house will be constructed entirely fireproof.

On motion, duly made and seconded, approved.

Appeal No. 99 of 1902, New Building No. 1883 of 1901, Brooklyn, premises south side of Scholes street, 350 feet from the corner of Waterbury street, Freses Consumers' Brewery, Frederick Eiender, architect, appellant.

The building laws require (section 106) that concrete arches between iron or steel beams shall be reinforced with corrugated sheet steel, steel ribs or metal in other forms, weighing not less than one pound per square foot, and having no openings larger than 3 inches square.

In the building herein described I proposed to put in concrete arches (for which contracts have been awarded as per accompanying specifications) between the steel floor beams on three tiers, all to be made of one part Portland cement, two parts sharp, clean sand and three parts of broken stones or coarse gravel, to be 6 inches thick at the crown and to have a rise of not less than 1 1/2 inches to the foot span; these arches will, I believe, carry more than the steel beams on which they bear and a great deal more than the weight intended to be imposed on them, and that the steel ribs, sheet steel or corrugated steel will not increase their carrying capacity and only add a great expense to the owners without aiding in any manner.

The building is to be used as a cold storage house (for lager beer), and such being the case the several rooms will be continually wet and the metal would in a very short time rust and fall out (as I have noted in several cases) from exposure to the damp air, besides being exposed some times to escaping ammonia.

I respectfully ask this honorable Board of Examiners to allow me to put in these concrete arches as specified, without reinforcing same as per building laws, as the same has been done by me in more than one hundred cases, and I have yet to hear of the first accident or the breaking or cracking of an arch in any building in which I have had charge, and in which I put in the same style arch. In my experience of over twenty years in the line of brewery construction, concrete arches have practically been used in preference to all others, except in the coldest of winter weather, when to hurry the work I had to put in brick arches of from two to three rowlocks.

I also propose to run through the arches four (4) 4-inch iron pipes, two for leaders and two for drains, also two 7-inch diameter holes, with cast iron frames to same, to allow the rubber hose to pass from one floor to the floor below, so as to fill the tanks (which has to be done with hose).

On motion, duly made and seconded, approved.

Appeal No. 101 of 1902, New Building No. 113 of 1902 (laid over April 29).

Mr. John W. Stevens appeared in explanation.

On motion, duly made and seconded, approved.

Appeal No. 102 of 1902, Alteration No. 450 of 1902, premises No. 36 East Thirty-eighth street, Hoppin & Koen, architects and appellants.

It is proposed to construct the easterly wall of the second story of the extension of angle and tee iron framework filled in with proof blocks four inches thick or hard brick the same thickness and covered on the exterior with galvanized iron. The framework and fireproof filling to be supported on steel I beams and also brackets from face of brick wall in story below.

On motion, duly made and seconded, approved.

Appeal No 103 of 1902, Alteration No. 74 of 1902, premises Nos. 54 to 58 East Ninth street, Louis Korn, architect and appellant.

It is proposed to erect on the top of this building a dye house to be full width of lot, but only half its depth. It is proposed to erect this building absolutely fireproof, having no connection with main building except that the entrance to the proposed dye house will be from the roof of main building. Proper fire-escapes connecting with fire-escapes of main building will be provided, so that in case of fire escape can be had if the main stair cannot be reached, the same as on the other floors.

The bearing walls are not to be raised, so it is proposed to use light construction for the sides, but the rear wall will not be raised.

The columns will rest on the columns of main building, which are of ample strength for the additional load imposed, which can also be said of the foundations. The floor of the proposed dye house will not rest on the roof of main building and will be constructed of steel beams and porous terra cotta arches; between the

underside of this floor and the main roof there will be an air space, as shown on drawings.

There will be no heavy work done in this dye house. It will not endanger the safety of the main building in any way, and as the main structure is of ample strength to carry the additional load that the proposed dye house might impose upon it, I respectfully place the matter before your honorable Board.

Mr. Summerfield appeared in explanation.

On motion, duly made and seconded, denied.

Appeal No. 104 of 1902, Alteration No. 82 of 1902, Bronx, premises east side of Third avenue, northeast corner of Westchester avenue, Arthur Actander, architect and appellant.

To alter a frame building existing:

1. That the building, as a whole, will be superior by allowing the three extensions to be carried up level with main building.
2. That the building, which is now wood covered on the outside, will, when completed, as per plans, be covered entirely with galvanized iron work throughout.
3. That the extension will be only two stories when raised to the height of main building and will in no manner be detrimental to risk of fire, but, on the contrary, will afford protection against fire in comparison with the present building.

Mr. Actander appeared in explanation.

On motion, duly made and seconded, approved.

Appeal No. 105 of 1902, Alteration No. 27 of 1902, premises Nos. 22-24-26 Lafayette place, Manhattan, Albert S. Gottlieb, architect and appellant; matter of iron shutters.

This building is a six-story non-fireproof store and loft building, adjoined on the north by a three-story brick house used for mercantile purposes and on the south by the three-story stone building used by the Lafayette Turkish Baths.

New windows have been cut in the north and south walls of the building under consideration, some of the windows coming over the adjoining houses, but most of them being high above the yards and about thirty feet or more from buildings on the opposite side of these yards. We wish to avoid any possible objection that the owner of adjoining property might raise if we swing outside shutters from these windows, and therefore apply for permission to exempt from shutters such windows as do not come directly above the houses. For these windows we propose to use inside swinging shutters (tin covered, according to law). Or in case the windows coming over the yards cannot be exempted, whether a tin covered inside swinging shutter can be used for them.

On motion duly made and seconded, referred to Chief Croker for examination and report.

Appeal No. 106 of 1902, New Building No. 209 of 1902, premises southeast corner of Twenty-third street and Third avenue, Neville & Bagge, architects and appellants.

To allow this building to be constructed with two lines of staircases instead of three, as required, inasmuch as the building covers 5,709 square feet in area, which is only 709 square feet in excess of the area permissible for two lines of stairs.

The building is only five stories in height and will have the usual outside fire escapes required; furthermore, one of the existing stairs is wider than is required, being 4 feet wide instead of 3 feet.

Mr. Bagge appeared in explanation.

On motion, duly made and seconded, approved on condition, that the easterly staircase be inclosed in 2-inch fireproof partitions, including partitions forming passage to street, and that the doors leading to said staircase be fireproof.

Appeal No. 107 of 1902, New Building No. 1570 of 1901, premises southeast corner of Seventh avenue and Forty-ninth street, Manhattan; Neville & Bagge, architects and appellants.

To omit the second flight of stairs (interior) as called for on last amendment, to substitute therefor an outside iron stairs with a passageway from main hall on each floor above first story connecting with same as shown on drawings herewith attached, inasmuch as this forms a better means of escape in case of fire, as the interior stairs will certainly form a smoke flue.

Mr. Bagge appeared in explanation; also Messrs. Hallahan & Ahearn.

On motion, duly made and seconded, laid over.

Appeal No. 108 of 1902, New Building No. 176 of 1902, premises Nos. 130 and 132 Fifth avenue; Robert Maynicke, architect and appellant.

To modify the Building Code so that two interior staircases and one exterior staircase may be provided for the building, instead of four staircases, as required by section 75 of the Code.

The area of the lot is 10,973 square feet. The area above the first story covered by the building is 10,578 square feet. As only three staircases are required by 10,000 square feet, the additional or fourth staircase will be required for the 578 square feet in excess of 10,000 square feet.

This modification is requested in consideration of various parts of this building being planned to be constructed in a manner which is better than that prescribed by the Building Code.

Mr. Julius Franke appeared in explanation.

On motion, duly made and seconded, approved, on condition that an outside staircase be built at the point marked "Column A 6" on the plans (and as shown on small drawing marked "Exhibit A," this date), at the northwest corner of the building, said staircase to be inclosed with wire mesh; and that the grill work around the elevator in the first story, on the north side, be backed on the inside with wide glass in metal frames.

Appeal No. 109 of 1902, New Building No. 107 of 1902, premises southeast corner of Fifty-fifth street and Broadway, Manhattan, George F. Pelham, architect and appellant.

Permission is respectfully requested to omit third staircase and that plans be approved.

It would be a hardship to put in this third staircase, as the means of egress in case of fire are as follows:

Two continuous lines of stairs remote from each other and a passenger elevator, and it is further proposed to add an additional elevator, which will be inclosed with terra cotta and angle iron partitions the entire height, and to add fire-escape balconies in the court, taking in the apartment on the southerly Broadway side of building, both of which are now shown on plan. It is further submitted that the building covers an area of 5,927 square feet, which is only 927 feet over that required for two staircases.

Mr. Keiser appeared in explanation.

On motion, duly made and seconded, approved on condition that the grill work inclosing the passenger elevator next to the staircase on all floors be backed with wire glass in metal frames; and that the elevator shafts be inclosed with solid fireproof partitions with metal covered doors.

Adjourned.

JAMES GAFFNEY, Clerk of the Board of Examiners.
